

iSeries Output Application Development

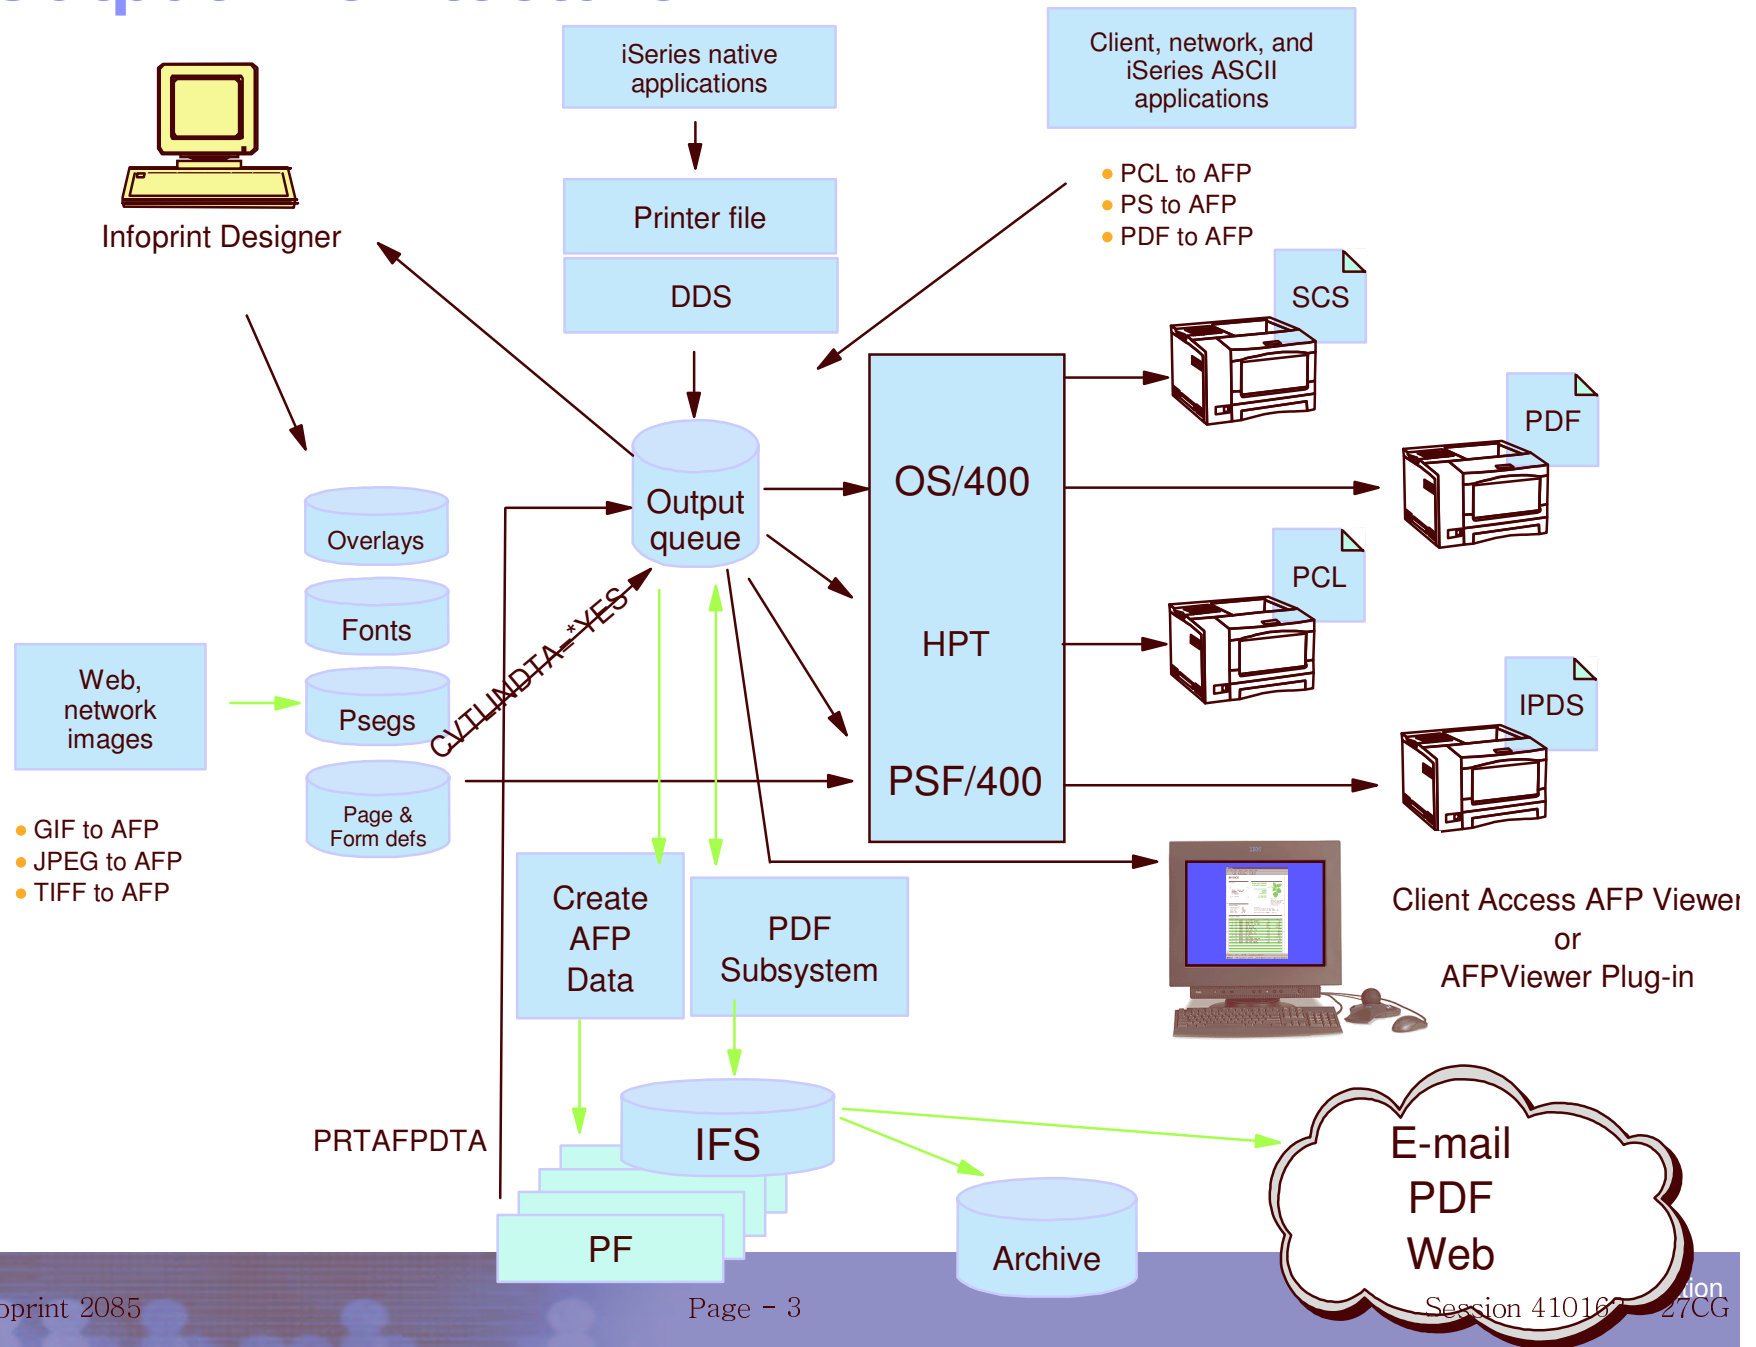

Glenn Rose, IBM Printing Systems
agrose@us.ibm.com

Agenda

- **Provide Enthusiasm for iSeries Output Tools**
 - **Understanding the Architecture**
- **Power of Native Tools - V5Rx**
 - **Printer File and DDS**
 - Fonts, Multi-up, Duplex
 - Overlays, Page segments, Page Definitions, Form Definitions
 - **Other iSeries Integrated Tools**
 - Infoprint Server
 - Infoprint Designer
 - Advanced Function Print Utility - Print Format Utility
 - Advanced Print Utility
 - Toolbox, SAP R/3
- **Help you get the most out of your iSeries**
- **Reference List - Additional Information**

iSeries Output Architecture

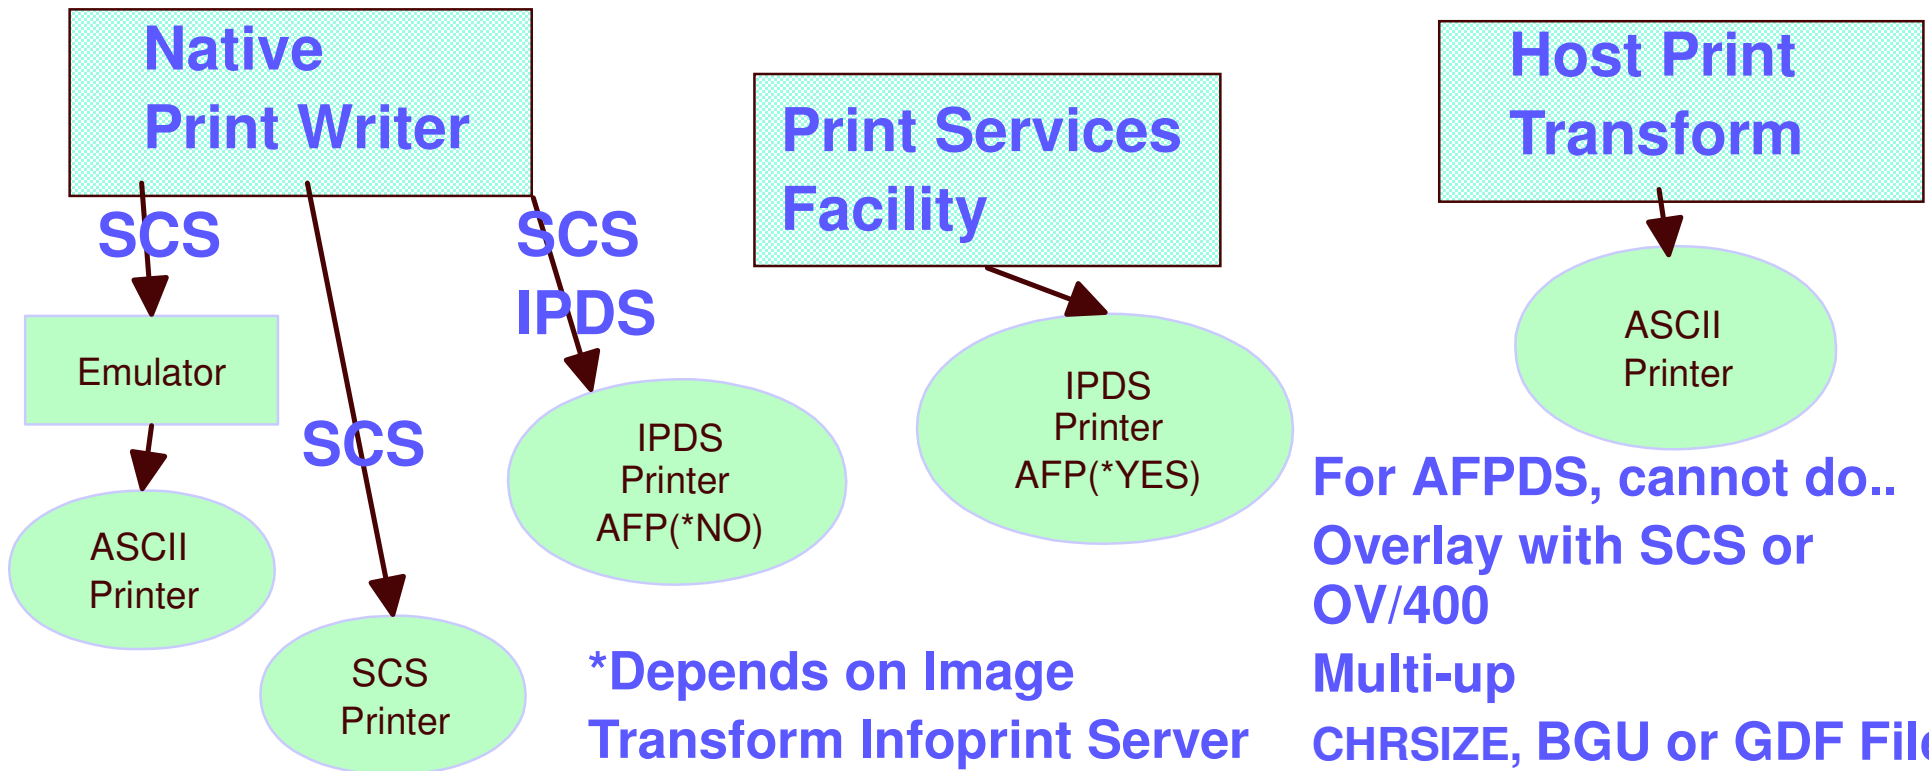

Print Writer and Printer File Types

**SCS
IPDS
USERASCII**

**SCS
IPDS
AFPDS
LINE
AFPDSL
USERASCII***

**SCS
AFPDS
(PCL4/5 or PPDS
3/4)
USERASCII**

**For AFPDS, cannot do..
Overlay with SCS or
OV/400
Multi-up
CHRSIZE, BGU or GDF Files
V5R1 - Expanded Color**

***Depends on Image
Transform Infoprint Server
for pcl, ps and pdf to AFP**

PRINTFILE

- **Provided with System, Command Created, DDS created**
- **Parameters that are used by the application/Spool Writer**
 - **Data Stream is Determined**
 - ☑ ***SCS, *LINE, *IPDS, *AFPDS, *AFPDSLIN, ...**
 - ☑ **Can limit where spool file can be printed**
 - ☑ **Every spool file has a print file**
 - **Parameters have changed**
 - ☑ **New Hardware and Software Capabilities**
 - ☑ **Adding function and power for output**
 - **Each Release**
 - ☑ **V5R1 - CVTLINDTA=*NO**
 - ☑ **V4Rx - 'Stapling, Constant Back, etc.'**
 - ☑ **V3R2 - 'Page/Form Definitions**

Printer Files

- **Printer files can be created, overridden, changed**
- **CRTPRTF**
 - Printer file affects entire characteristics of spool file
 - **DDS printer file**
 - Complete flexibility - field and page level
 - Dynamic selection of overlays, page segments, etc.
- **OVRPRTF**
 - Interactive, CL Program, HLL Program
 - Temporary - job, program, sign-on session
- **CHGPRTF**
 - Permanent
- **DSPOVR**
- **DLTOVR**
- **You or your application are in control**

Common Uses of the Printer File

- **Change to specific printer or output queue**
- **Change CPI and LPI**
- **Change font**
- **Implement duplex**
- **Use multi-up (2, 3, 4)**
- **Use Computer Output Reduction (COR)**
- **Add overlays**
- **Page size/rotation**
- **Select input/output bin**
- **DDS for external print formatting**
- **Finishing Options, Stapling, etc.**

DDS Example

```

100      A* Sample of keywords and the use of variables
200      A* Demonstrate multiple DDS FUNCTIONS for IBM AS/400
300      A*      Add QGDDM to library list for GDDM scalable fonts
400      A* USE: CHGPRTF FILE(EXAMPLE) DEVICE(XXXXXXXX) TYPE(*AFPDS)
500      A*              OVRFLW(64) GRAPHIC CHARACTER SET 1264 & CODE PGE 420
600      A*
700      A          R HEADR1
800      A                      PAGRTT(0)
900      A                      DRAWER(1)
1000     A          LIN01          35A
1100     A                      FNTCHRSET(C0H400J0 T1V10037)
1200     A                      POSITION(0.7 3.0) COLOR(RED)
1300     A          LIN02          35A
1400     A                      FNTCHRSET(C0H200B0 T1V10037)
1500     A                      POSITION(&VALDWN &VALACR) CO
1600     A          VALDWN          5S 3P
1700     A          VALACR          5S 3P
1800     A*
1900     A          R LINE1
2000     A                      LINE(1.3 2.6 0.2 *VRT *NARROW) +
20xx     A                      COLOR(*RGB 75 20 0)
2100     A                      LINE(1.1 2.8 0.4 *VRT *MEDIUM)
2200     A                      LINE(0.9 3.0 0.6 *VRT *WIDE)

.....
97       A          R PSG2
98       A                      PAGSEG(BOOT3 9.7 7.0 +
99       A                      (*SIZE 0.7 0.5) (*ROTATION 0))
100      A                      PAGSEG(BOOT3 9.7 7.0 +
101      A                      (*SIZE 0.8 0.55) (*ROTATION 90))

```

Overlays

Front side overlay:

```

Overlay ..... FORM1 Name, *NONE, *SAME
Library ..... MYLIB Name, *LIBL, *CURLIB
Offset down ..... 0 0-57.790, *SAME
Offset across ..... 0 0-57.790, *SAME
    
```

Back side overlay:

```

Overlay ..... TERMS Name, *FRONTOVL, *NONE, *SAME
Library ..... MYLIB Name, *LIBL, *CURLIB
Offset down ..... 0 0-57.790, *SAME
Offset across ..... 0 0-57.790, *SAME
    
```

Print on both sides. *YES

- Can specify overlay for SCS, IPDS, AFPDS data streams and OV/400
- For SCS and IPDS can specify after spool file creation

DDS parameter:

OVERLAY(*LIBL/DDSOVL1 6.0 1.3)

Application must produce second page to print on the back (Until V4R4)

Overlays

- **Can create with..**
 - **Infoprint Designer (GUI)**
 - **AFP Utilities for AS/400 (Green Screen)**
 - **AFP Printer Driver for Windows (in CA Express/web download)**
 - ▶ **Create overlay from any Windows application and upload to AS/400 - Op Nav GUI**
 - ▶ **Excellent for text overlays such as "Terms and Conditions"**
- **DDS and Equivalent to an Overlay**
 - **DDS can draw lines, boxes, place page segments**
 - **Advanced Print Utility (PrintSuite) allows placement of page segments and box draw (no shading)**
- **PC design tools**
 - **Infoprint Designer - 5733-ID1**
 - **ISIS Forms Designer, Elixir/400 for AFP, other OEM products**

Note: Can specify Overlay in Printer File, DDS, Page Definition, Form Definition, Advanced Print Utility, Print Format Utility, AFP Toolbox

Page Segments

DDS parameter:

Example 1

PAGSEG(BUSPART 7.20 1.9)

Example 2

PAGSEG(&PSGNAM &PSGDWN &PSGACR)

PSGNAM	8A	P
PSGDWN	5S	3P
PSGACR	5S	3P

P indicates Program-to-system

Dynamic placement of Overlays, Page Segments, Boxes, Lines

Must be 8 positions

Must be 5 positions with 3 decimals

Note: Can specify Page Segments in Overlays, Advanced Print Utility, Print Format Utility, Page Definition, AFP Toolbox

IPDS & AFPDS DDS KEYWORDS

IPDS KEYWORDS

- **BARCODE**
- **CHRSIZ**
- **COLOR**
- **FONT**
- **LPI**
- **PAGRTT**

AFPDS KEYWORDS

- **BOX**
- **CDEFNT**
- **ENDPAGE**
- **FNTHRSET**
- **GDF**
- **IGCCDEFNT**
- **LINE**
- **OVERLAY**
- **PAGSEG**
- **POSITION**
- **TXTRTT**

Page and Form Definitions

- Created by Infoprint Designer or from Source with PPFA
- Another method for document formatting
- Application independent
- Works with *LINE or *AFPDSLNE data
- Source entry via PDM, compile via PPFA
- PPFA required only for page and form def creation
 - Can use page and form defs without PPFA
- Specify Form Def in Printer File
- Cross platform tool

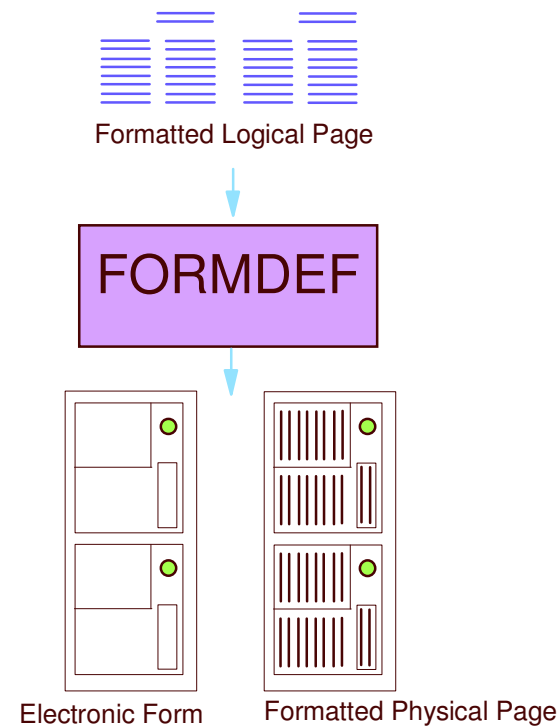

Printer file parameters:

Page definition	MYPDF	Name, *SAME, *NONE
Library	MYLIB	Name, *LIBL, *CURLIB
Form definition	MYFMDF	Name, *SAME, *NONE, *DEV
Library	MYLIB	Name, *LIBL, *CURLIB

Standard Form Definitions documented in "Guide to Output"

Page and Form Def Concept

- Page Def: Similar function to AS/400 DDS
 - Formats logical page, selects fonts, positions and rotates fields, etc.
- Form Def: Similar function to AS/400 Printer File
 - Positions logical page on physical page, selects overlays, duplexing, etc.

Sample Source - Formatting

- **Offsets for Duplex on Three Hole Punch Paper**
- **Formdef To Offset Front And Back For Three Hole Paper.**
- **No Pagedef, Formdef Ignored If Sent To Non-APF Printer**

```
Columns . . . :    1  71                Edit                                CUSTOM/PPFASRC
SEU==>                                           FBOFST

Infoprint Designer for iSeries

Product Summary

- State of the art design front-end to the robust, integrated AFP/IPDS print/presentation subsystem on AS/400

Key Features

- Integrated for design operations, integrated for print operations
- Overlay Design editor for designing electronic forms
- Image Design editor for designing images
- Layout Design editor for designing the complete application
- Creates standard AS/400 print resources
- Windows design functions integrated with upload/download for ease of design and production
- Professional, high-precision system geared to the demands of business communications
- Existing applications can be redesigned without application changes
- Entire AFP Font Collection integrated into Infoprint Designer
- Design platform for new Java print architecture

Infoprint Server for iSeries V5R1

Focus of Infoprint Server

- **Electronic Distribution of output**
- **iSeries management of network print**

iSeries support for PDF

- Transform services for any iSeries standard output (AFP, IPDS, SCS, even OV/400)
- PDF output to e-mail, IFS, or PDF printer
- High-function PDF Server
- Segmentation - "Electronic Burst and Bind"

Integrated e-mail of output

- PDF output can be automatically e-mailed
- Multiple e-mails based on segmentation
- Exits for customization

iSeries as a network print server

- PCL, Postscript, and PDF to AFP
- Postscript and PDF transform is IBM-Adobe full-function Level 3

Web-ready AFP

- Add external resources to AFP data for portability
- Add indexing for navigation

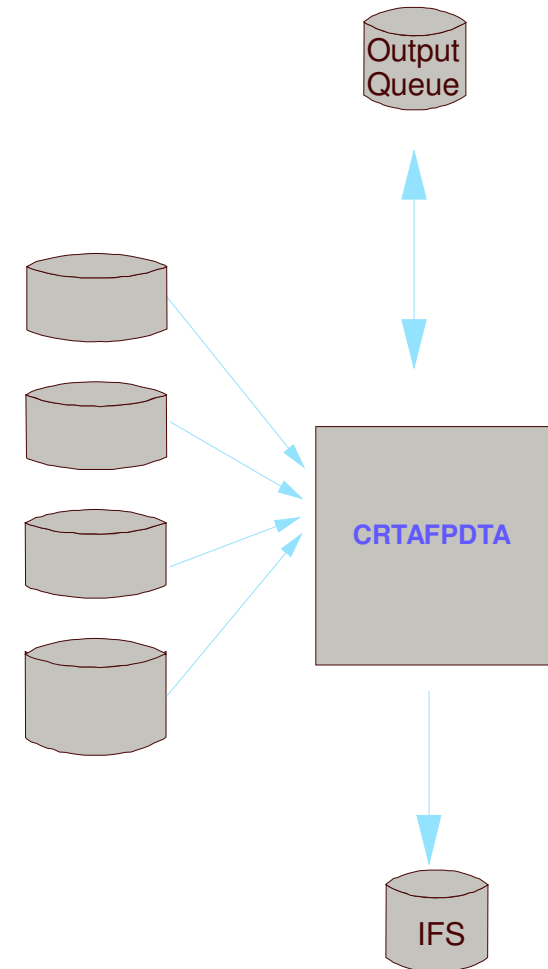

Image transforms

- GIF, TIF, and JPEG transforms to IOCA
- Windows-based

CRTAFPDTA - Create AFP Data

New iSeries command providing:

- Transform line data to AFP
 - Applications formatted with page definitions can be written out in AFP
 - Enables use of HPT (Host Print Transform) for printing to PCL printers
 - Enables viewing of line data formatted applications
- Transform AFP to fully composed AFP
 - Encapsulate output file with external references for system to system portability or network viewing
 - Web view using with AFP Viewer plug-in for Netscape
- Indexes AFP
 - Create indexing for line data or AFP output files
 - Embedded indexes provides navigation for web viewing

AFP Utilities for AS/400 - Overlay

- **Look and feel of PDM**
 - **Function key driven**
- **Place**
 - **Page Segments**
 - **Text**
 - **Can present in different orientations**
 - **Bar codes (14 types)**
 - **Graphics**
 - **GDDM or BGU**
- **Draw**
 - **Lines - solid, dashed, or dotted, line thickness**
 - **Box with or without shading, solid, dashed or dotted**
- **Support for all type fonts**
- **Can position by row/column or inches/centimeters**
- **Can use any terminal**
- **Creates efficient AFPDS overlay**
- ***View option with Client Access Viewer (Operations Navigator) during design**

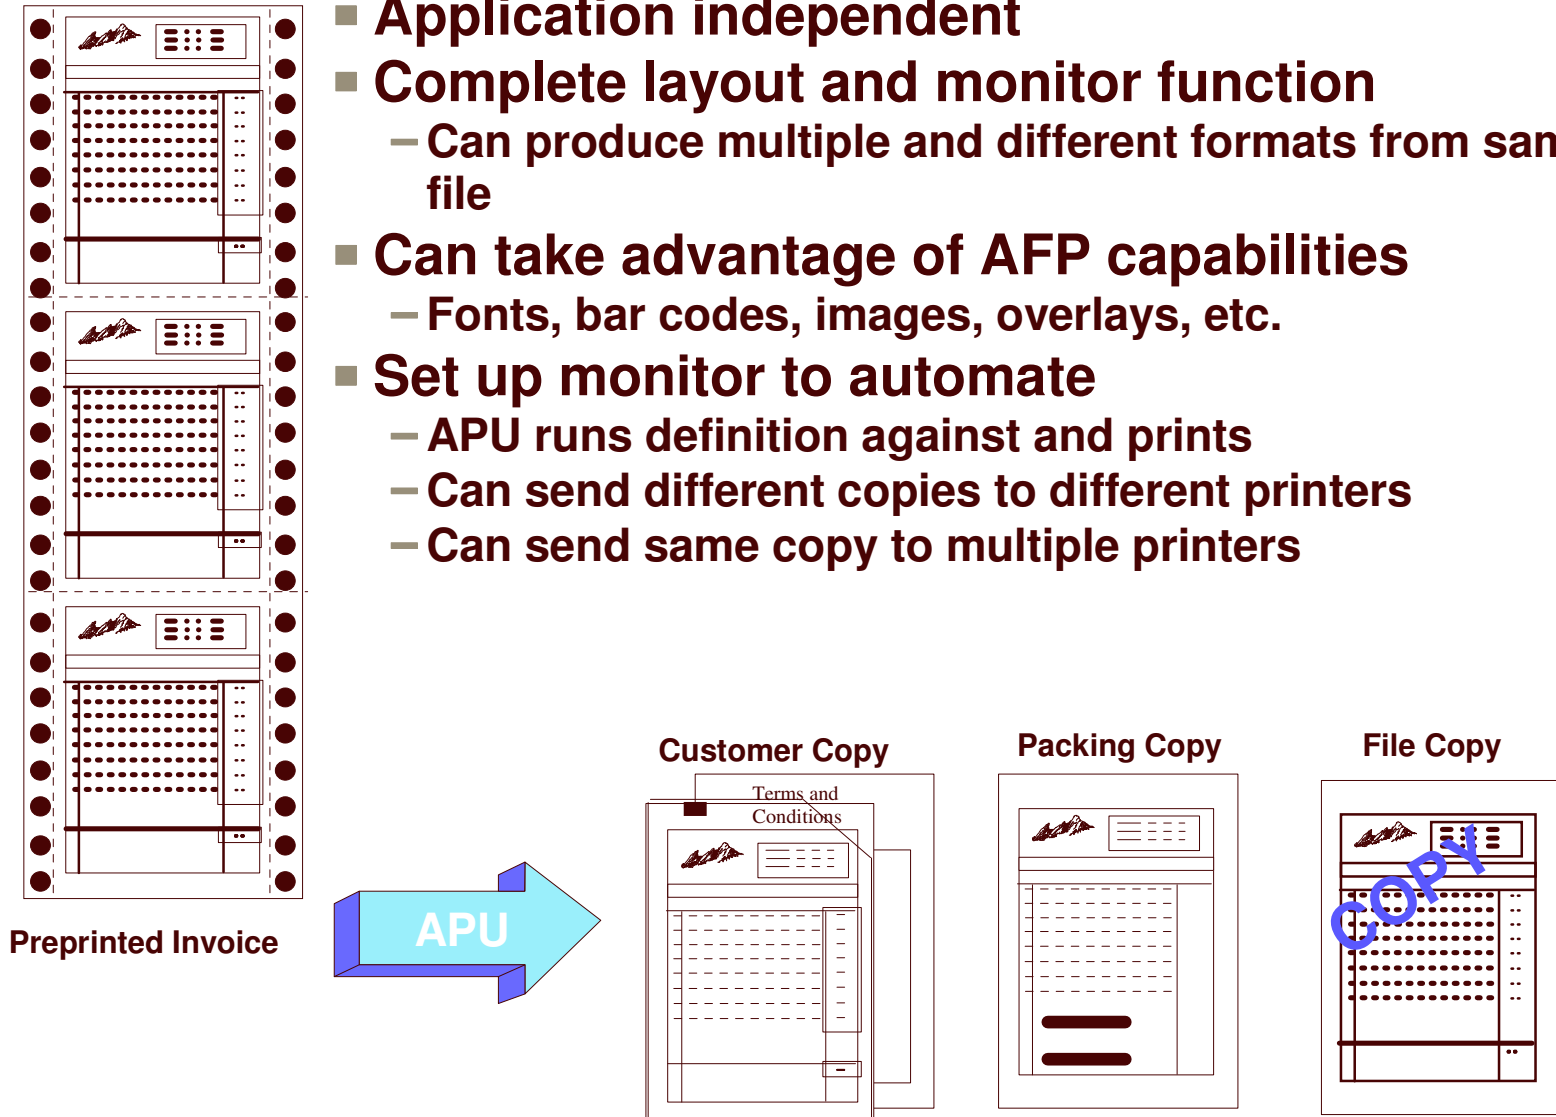

Print Format Utility

- **AFP output directly from database file, an "AFP Query/400"**
- **Easy to use interface**
- **Full AFP resource and document composition support**
- **Ability to replicate page layouts - ideal for multi-up applications such as labels**
- **A module of AFP Utilities/400**

Advanced Print Utility

- End user, interactive tool for reformatting existing SCS Spool File
- Application independent
- Complete layout and monitor function
 - Can produce multiple and different formats from same spool file
- Can take advantage of AFP capabilities
 - Fonts, bar codes, images, overlays, etc.
- Set up monitor to automate
 - APU runs definition against and prints
 - Can send different copies to different printers
 - Can send same copy to multiple printers

APU Visual Data Mapping

Define Field Mapping

APU Print Process

Typical AS/400 Print environment

AFP Toolbox

- **Set of Application Program Interfaces for generating AFP documents**
 - **Callable from ILE application programs (RPG, COBOL, or C)**
- **Designed for complex, dynamic printing applications**
- **Absolute control over all AFP functions**
 - **Combine application data with overlays, image, bar code, fonts**
 - **Dynamic text with justification and wrapping**
 - **Indexing tags for archive/retrieval applications**
 - **Dynamic positioning of all design elements**
 - **Image integration**

Toolbox Application Program

Will need to follow AFP Hierarchy

Begin and End Documents and Pages

Put Data on the Page

**Add Resources, Overlays, Page Segments,
Fonts, etc.**

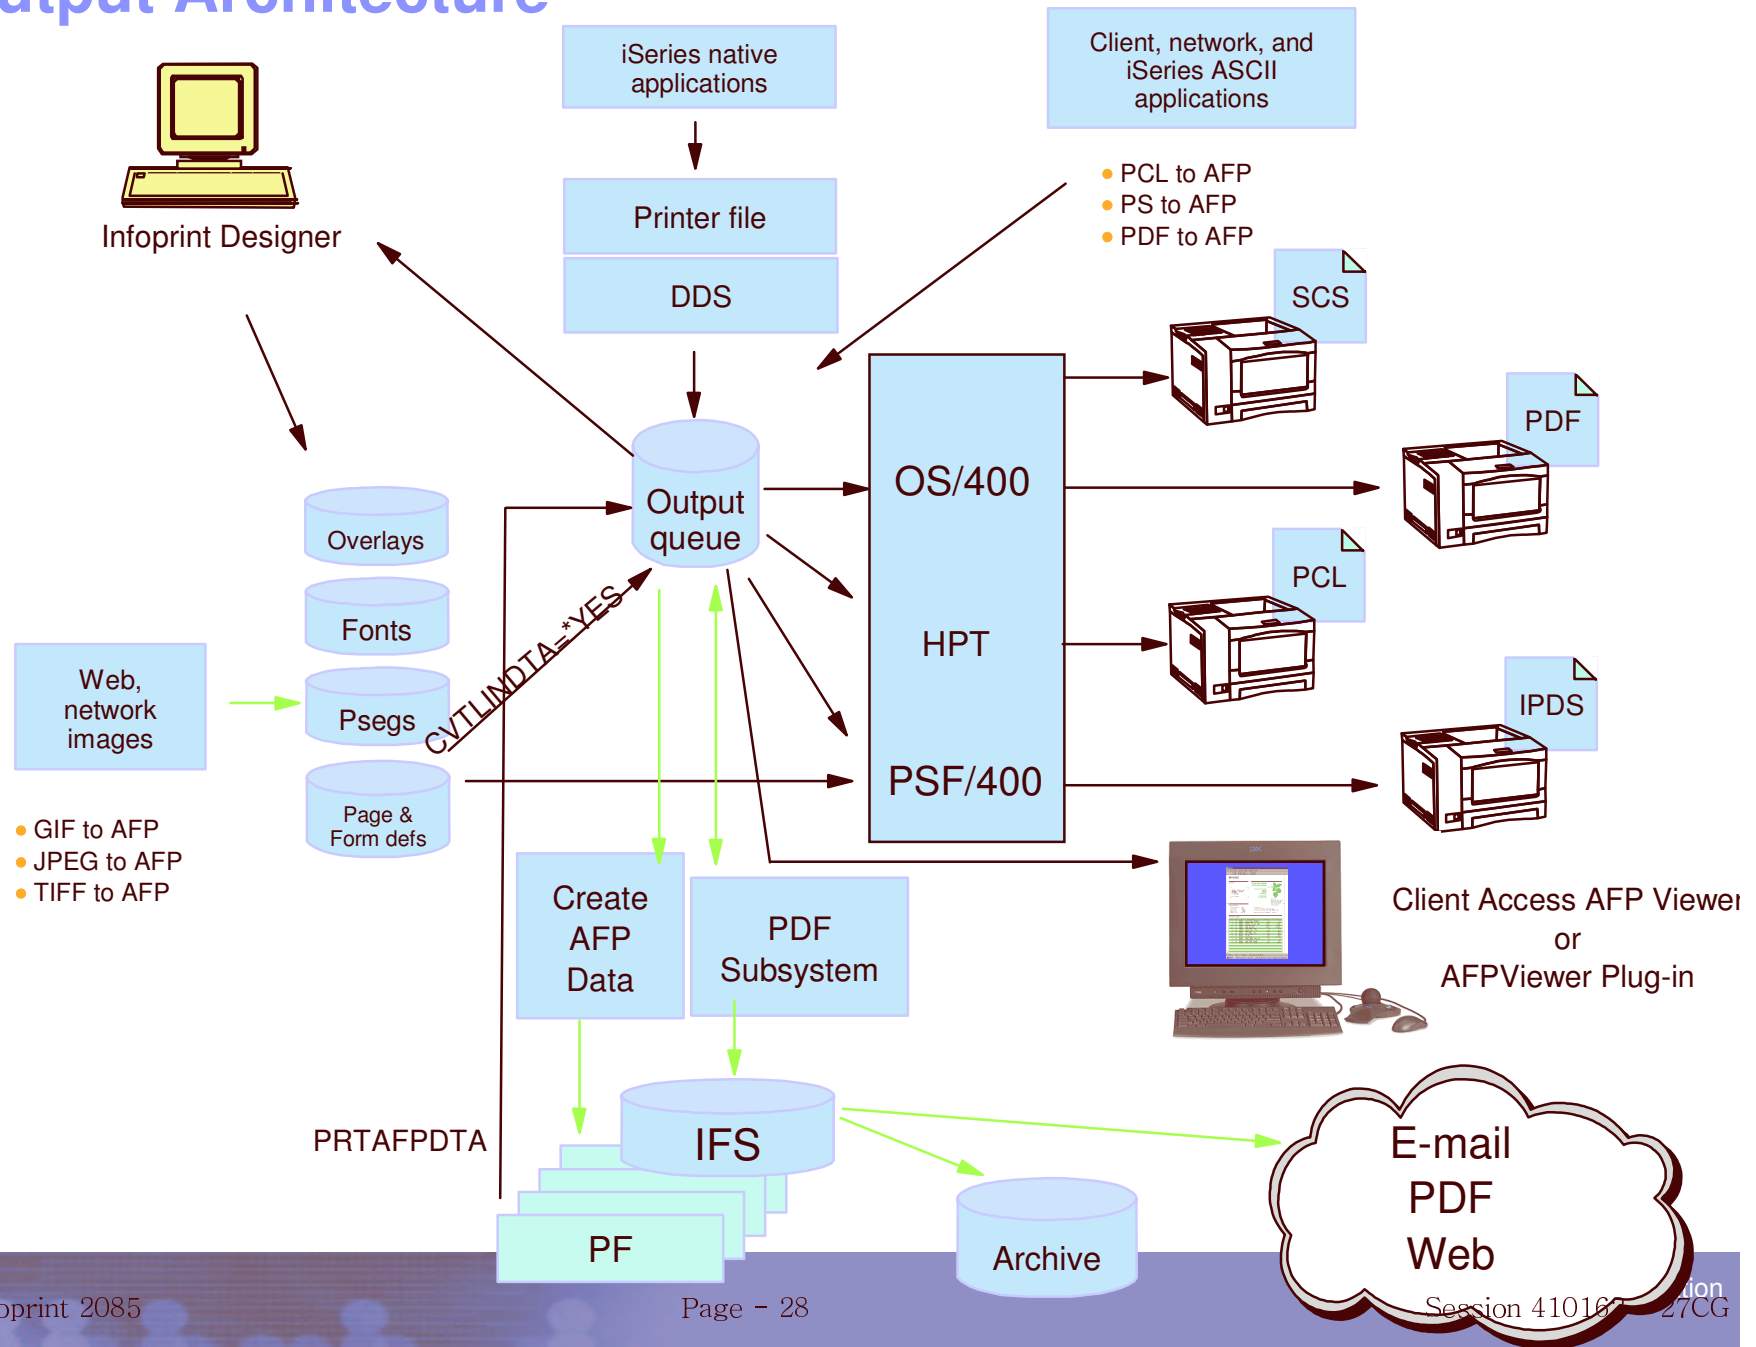

Control over All Objects

- Barcodes, Graphics, etc.

SAP R/3 Print

- **Can implement AFP with SAP R/3**
 - **OTF becomes AFPDS data stream**
 - **ABAP becomes LINE data**
 - Can use supplied Page Definitions and Form Definitions
 - Create customized
 - **AIX and AS/400 support**
- **Uses Z access method**
- **Enhanced output with overlays, images, bar codes, fonts**
- **PSF management and error recovery**
 - **Access to full range of IPDS printers**
- **Recommend Font Collection**
- **OTF - Print Services Facility/400 or Host Print Transform**
- **ABAP - Print Services Facility/400**

iSeries Output Architecture

Summary

V5R1 can:

- produce PDF from any iSeries output
- e-mail automatically any iSeries output
- publish iSeries output in either PDF or AFP format for web/client access
- design iSeries output applications with a new, integrated, fully graphical system
- archive iSeries output to a new, strategic, fully web-enabled archival system
- develop server print applications in Java
- print directly to iSeries-attached printers using Internet Print Protocol (IPP)
- segment iSeries output electronically for presentation or e-mail
- manage printing with the iSeries from any ERP software
- separate page formatting from applications without giving up anything
- Integrate web image into iSeries output applications
- print directly to PDF printers

V5R2 adds:

- Comprehensive control over email distribution and content
- SMTP support for integration with most mail servers
- PDF size control and bookmarking
- API access to PDF and email functions
- Planned interactive configuration of PDF and email
- Infoprint Designer enhancements including wizard-based complex design, 2D barcode, MICR, national language, finishing
- 2D barcode support integrated in DDS
- Finishing by group
- XML formatting with page definitions
- PDF and email functions in iSeries Access
- PDF printing in Web Access
- IPP Client Support
- New iSeries printers

Output to Printers or to the web

Conclusions

- The iSeries tools are powerful and have many options
- Applications can be totally contained within the iSeries
- Tight integration results in lower cost and increased productivity
- Web ready output is here today and will only get better! Color, color, color
- The future is colorful - use the color capability to design better documents - Hardware limitations today

2D Barcode Support

- What is 2D?
 - ▶ One-dimensional barcodes (i.e.. UPC, Postnet) are series of bars and white spaces that are scanned by a point scanner
 - Scanning UPC would yield 10-12 characters of data -- the product ID
 - ▶ 2D barcodes are a two-dimensional image pattern (i.e.. 2 inches square) that is read in its entirety
 - 2D barcodes can yield up to 4000 characters of data
- V5R2 Support for 2D
 - ▶ Support for three 2D symbologies
 - PDF 417 - up to 1850 characters
 - Datamatrix - up to 138 characters
 - UPS Maxicode - up to 3116 characters
 - ▶ 2D programming
 - New DDS keywords
 - Support in PPFA/400

PDF417

Datamatrix

Maxicode
