agrose@us.ibm.com

Michigan Infoprint Server Q12

Enabling "e-output"

- E-business is changing the face of business communications
 - ◆ Traditional information methodology has been "print and distribute"
 - ◆ Networks, Internet, and electronic documents are transforming this methodology
 - ◆ Electronic documents mean:
 - ▶ Tie to pre-printed form is broken
 - ▶ Flexibility in content
 - ▶ Flexibility in delivery
 - ◆ Networks and Internet drives e-business process re-engineering
 - ▶ Printing, if required, must take place later in the flow
 - ▶ Electronic documents and reports can flow as the process requires
- The output of e-business - "E-output"
 - ◆ Ability to create fully electronic pages of information and deliver them to the desired destination in the desired format

Infoprint Server for iSeries

Focus of Infoprint Server

- Electronic Distribution of output
- iSeries management of network print

iSeries support for PDF

- Transform services for any iSeries standard output (AFP, IPDS, SCS, even OV/400)
- PDF output to e-mail, IFS, or PDF printer
- High-function PDF Server
- Segmentation - "Electronic Burst and Bind"

Integrated e-mail of output

- PDF output can be automatically e-mailed
- Multiple e-mails based on segmentation
- Exits for customization

iSeries as a network print server

- PCL, Postscript, and PDF to AFP
- Postscript and PDF transform is IBM-Adobe full-function Level 3

Portable, web-ready AFP

- Add external resources to AFP data for portability and browser view
- Add indexing for navigation and report segmentation

Image transforms

- GIF, TIFF, and JPEG transforms to IOCA
- Windows-based

Using Infoprint Server

- Learning by example
 - Scenarios illustrating a business needs
 - How Infoprint Server can help
 - How it works
 - What you need to do to make it happen

OUTPUT

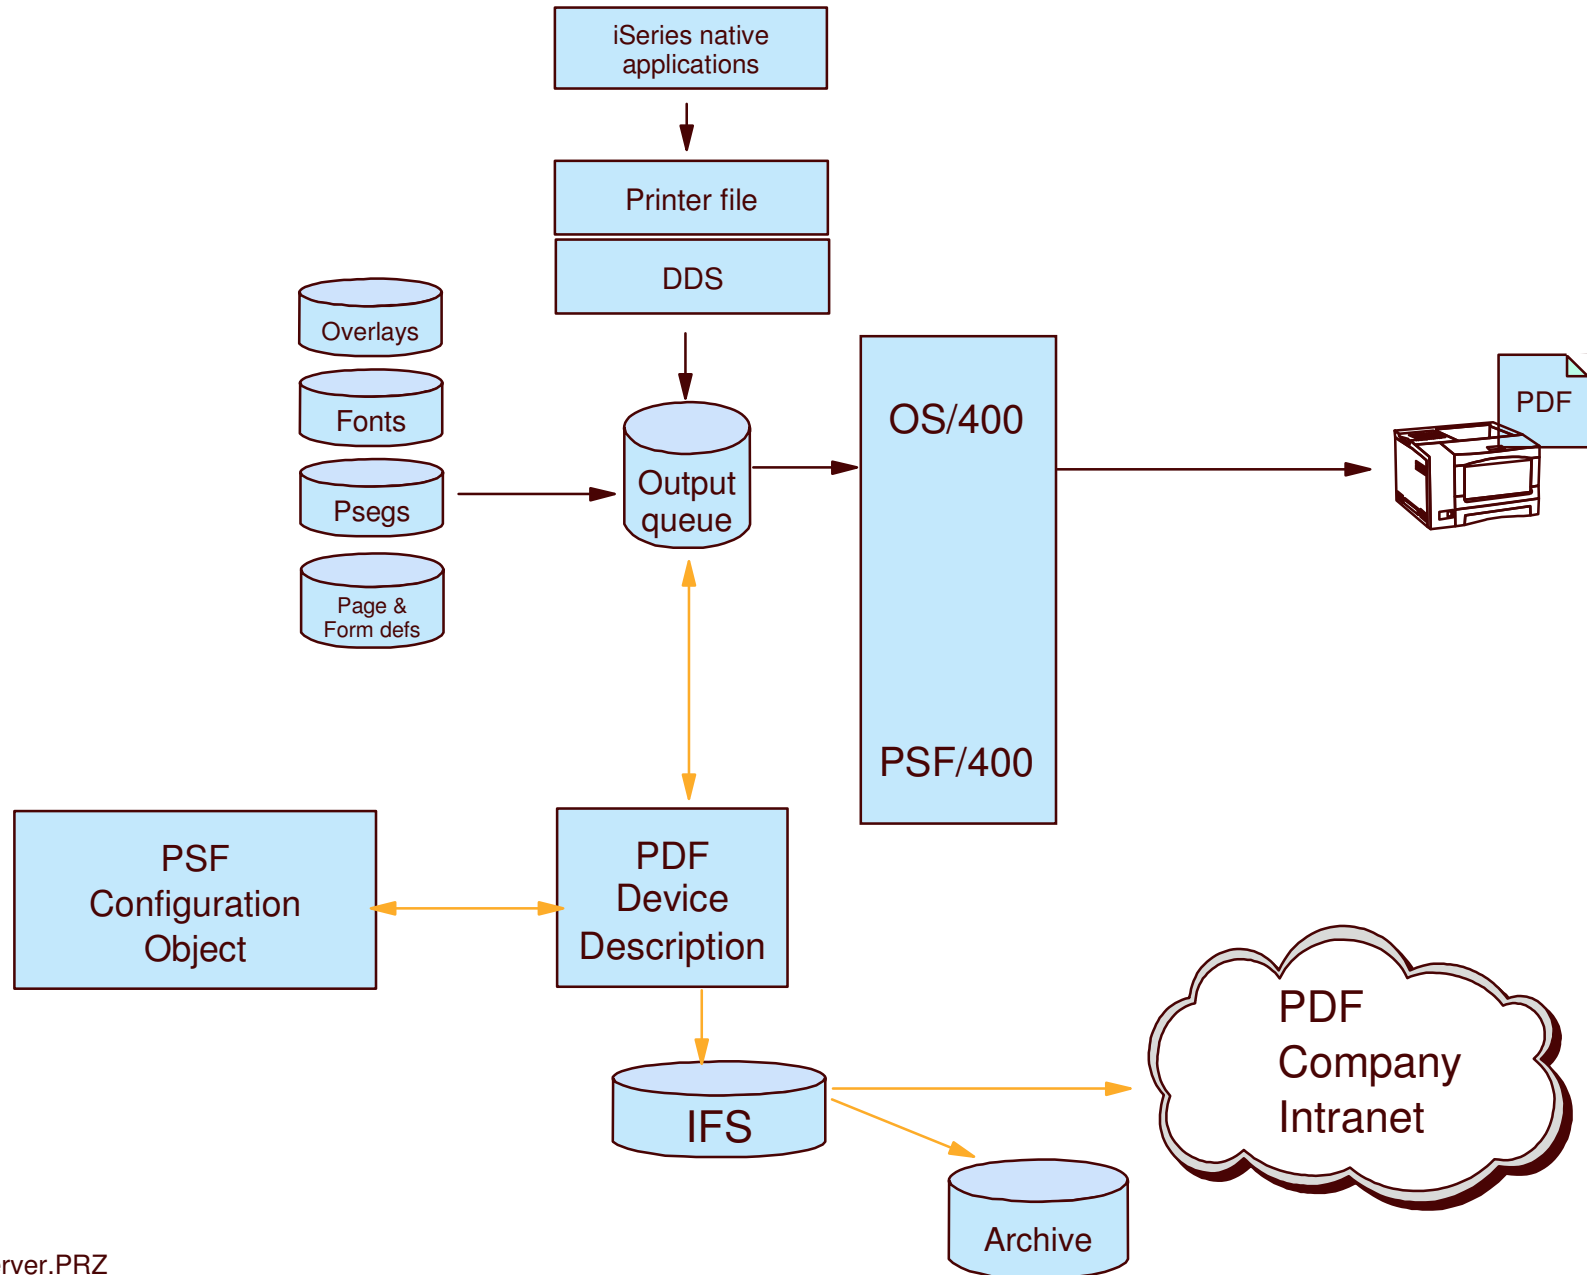

Printing
Systems

*The output
of e-business™*

Publish to the Web - solution

- 1. An OS/400 application creates the data and puts it on the spool.
- 2. Use the IPDS to PDF conversion function to store the data in the iSeries IFS.
- 3. Access the data from a web application or using Client Access.

PDF Web publishing

OUTPUT

Printing Systems

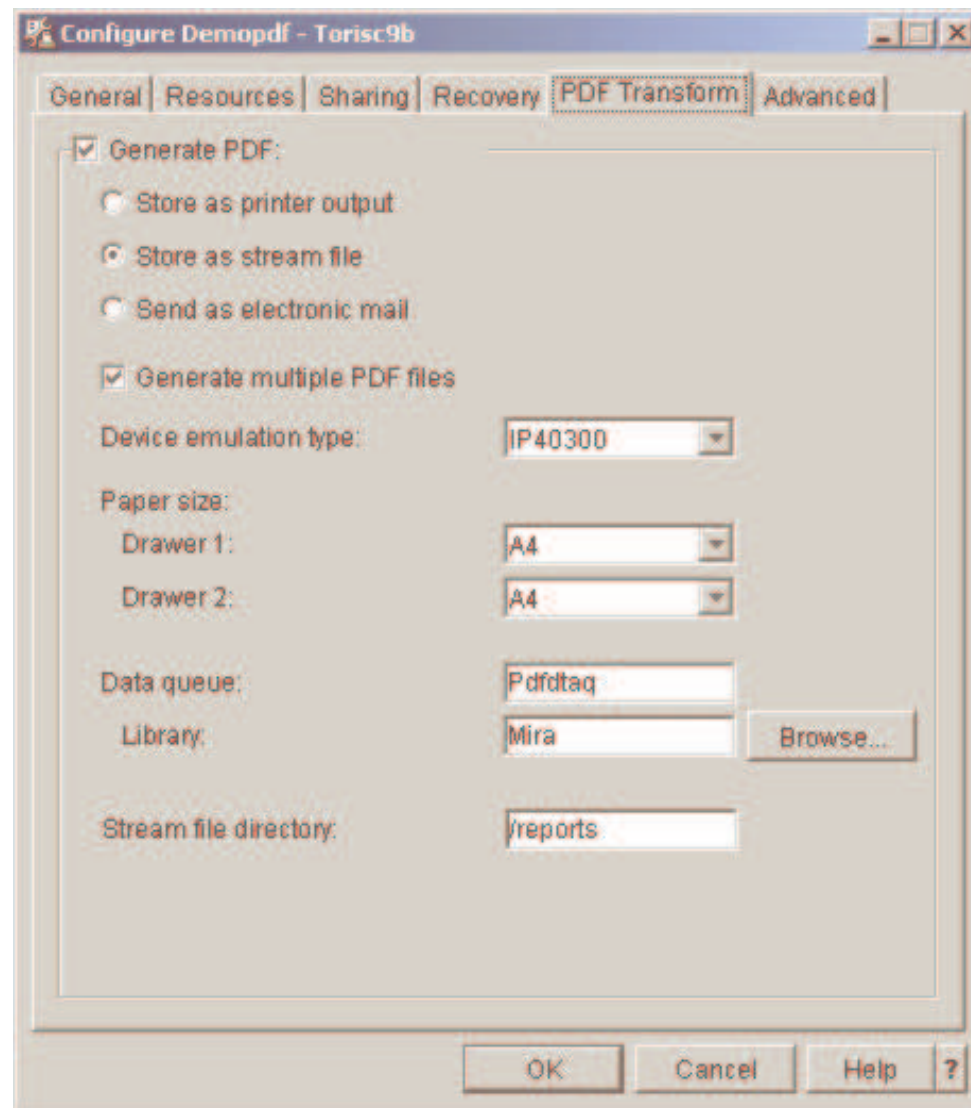

The output of e-business™

PDF subsystem setup

- Device Description:
 - Virtual *IPDS/AFP printer on *LAN
 - Loopback address (127.0.0.1)
 - Unique Port number
 - USRDFNOBJ Points to PSF Configuration object
- PSF Configuration object
 - Select PDFGEN(*MAIL/***STMF**/*SPLF)
 - **Single** or Multiple
 - Destination: Outq, **IFS directory**, or e-mail
 - E-mail mapping program
 - Default SENDER
 - Data queue
 - PDF device type (Recommend: *IP40300)
 - Paper size
 - Include PDF fonts Y/N

Using iSeries Navigator to create a PSF Config. Object

The same object can be build using the CRTPSFCFG or CHGPSFCFG commands.

PDF Output

- PDF transform enables:
 - Re-engineering of output distribution
 - Soft copy repositories for "demand pull" information dissemination
 - Printing directly to PDF-capable printers
 - Integrate with custom e-mail applications
- PDF files in ASCII, full text format
 - Full text output
 - SBCS raster and outline fonts
 - DBCS raster fonts
- Output PDF to:
 - Dynamic e-mail
 - **Integrated File System**
 - **Output queue**

400 CPU Parkway • Vegetation, NJ 55090 • Office: 555.499.2367 • Fax: 555.415.9794

Target Directory and File Name

If you specify a Root File System directory name, the file will be stored as:

`/PDF-directory-name/job-name/job-user-name+
/job-number_file-number_spooled-file-name_date_sequence-number.PDF`

In this example the target was specified as '/reports'

OUTPUT

Michigan Infoprint Server.PRZ
1 object(s) (Disk free space: 79.6 GB)

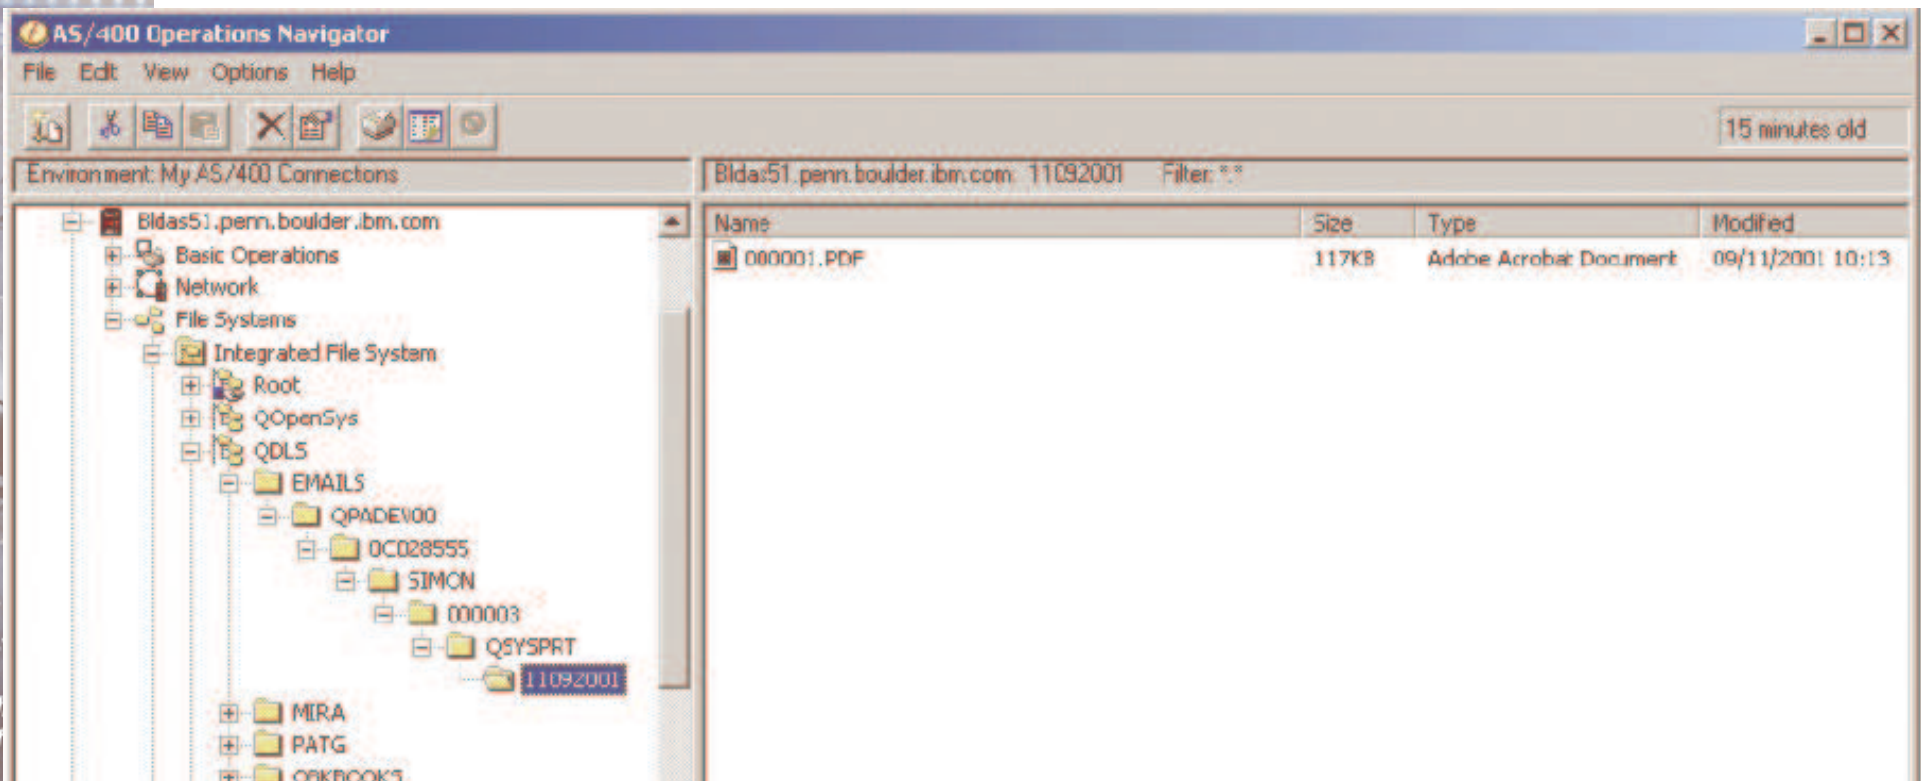

11 54.7 KB Internet 05/15/03

Target Directory and File Name

If you specify a directory name in the QDLS System, the file will be stored as:

`/QDLS/folder-name/job-name/job-number/job-user-name/file-number+
/spooled-file-name/date/sequence-number.PDF`

In this example the target was specified as `'/QDLS/EMAILS'`

More on Target Stream Files

- If you select "Generate multiple PDF files" the separate files will have sequence number 00001.PDF, 00002.PDF etc.
- File(s) will be generated as owned by the spooled file owner with public authority of ***EXCLUDE**
- Any directories that do not already exist are created by the PDF subsystem, are owned by QSPLJOB, and have a public authority of ***RX**

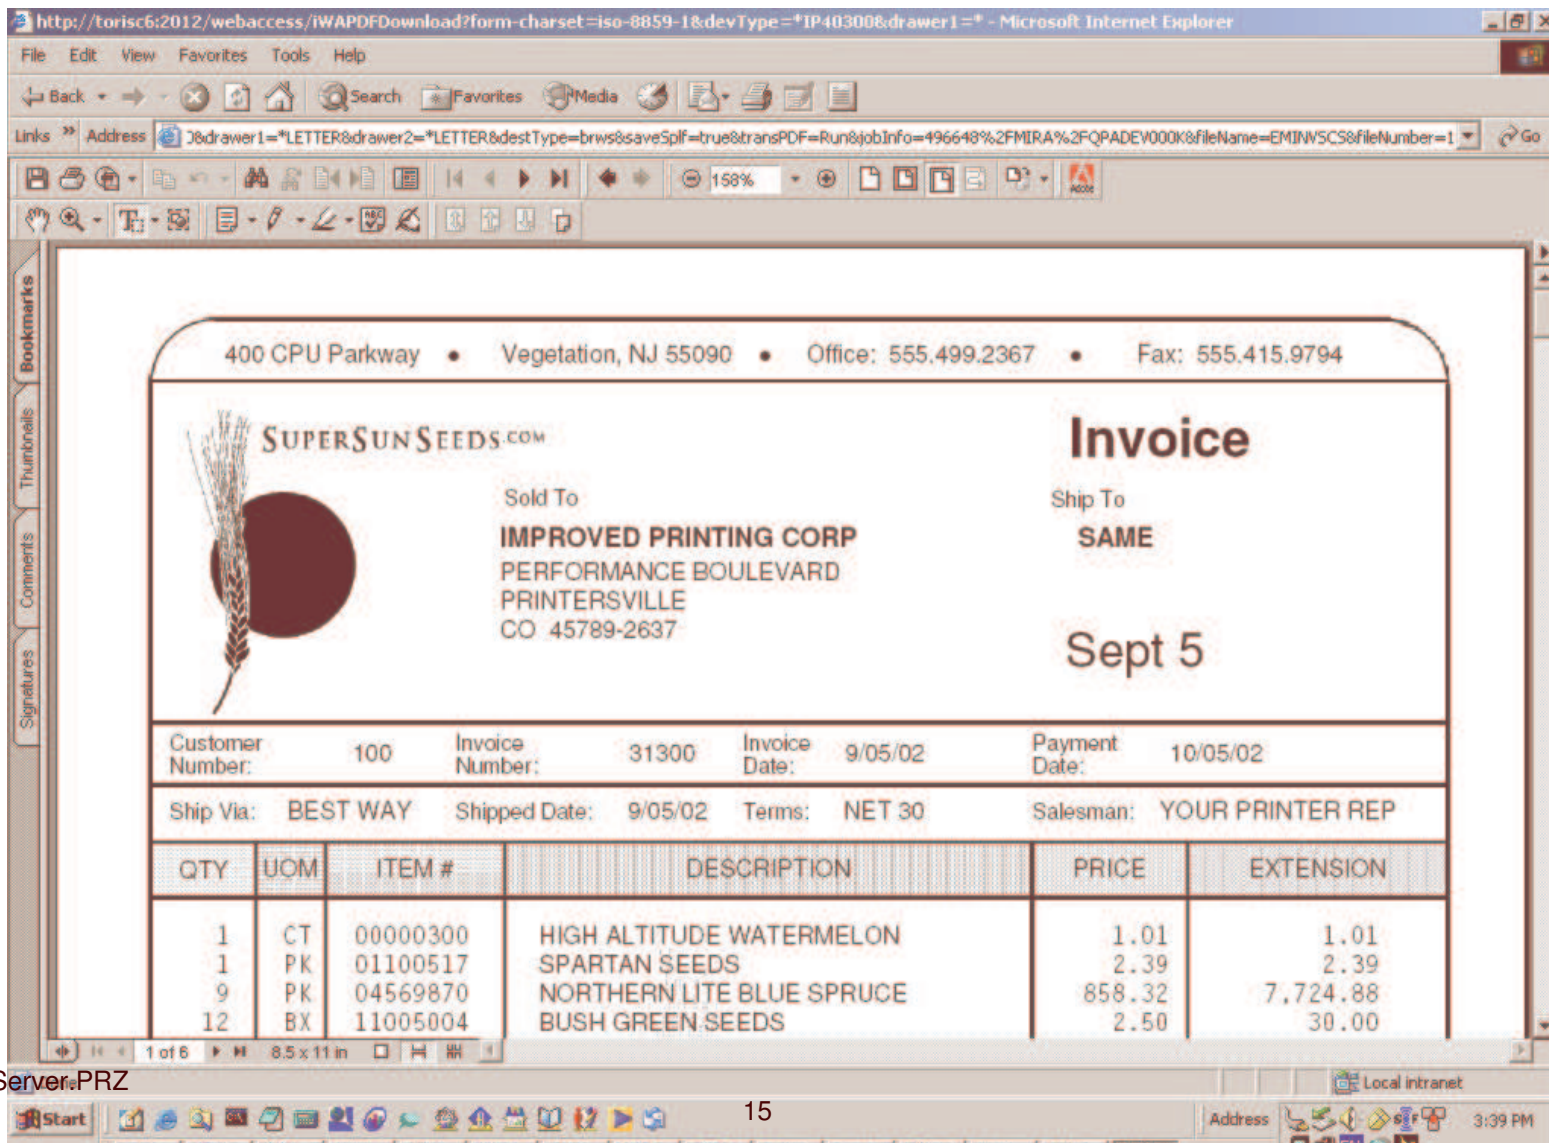

iSeries Access for WEB PDF support

- Use 5722-XH2

Michigan Infoprint Server: PRZ

Local intranet

Start 15 Address 3:39 PM

Electronic Report Distribution - solution

- 1. Use DDS keywords to insert Group tags in *AFPDS spooled file.
- 2. Original spooled file converted to multiple PDF files
- 3. User exit program converts department name to e-mail address.
- 4. Each PDF file sent to appropriate regional office as e-mail attachment
 - V5R1 uses SNDDST
 - V5R2 you can use SNDDST or any SMTP server.

(Other methods of segmenting and addressing the file will be discussed later.)

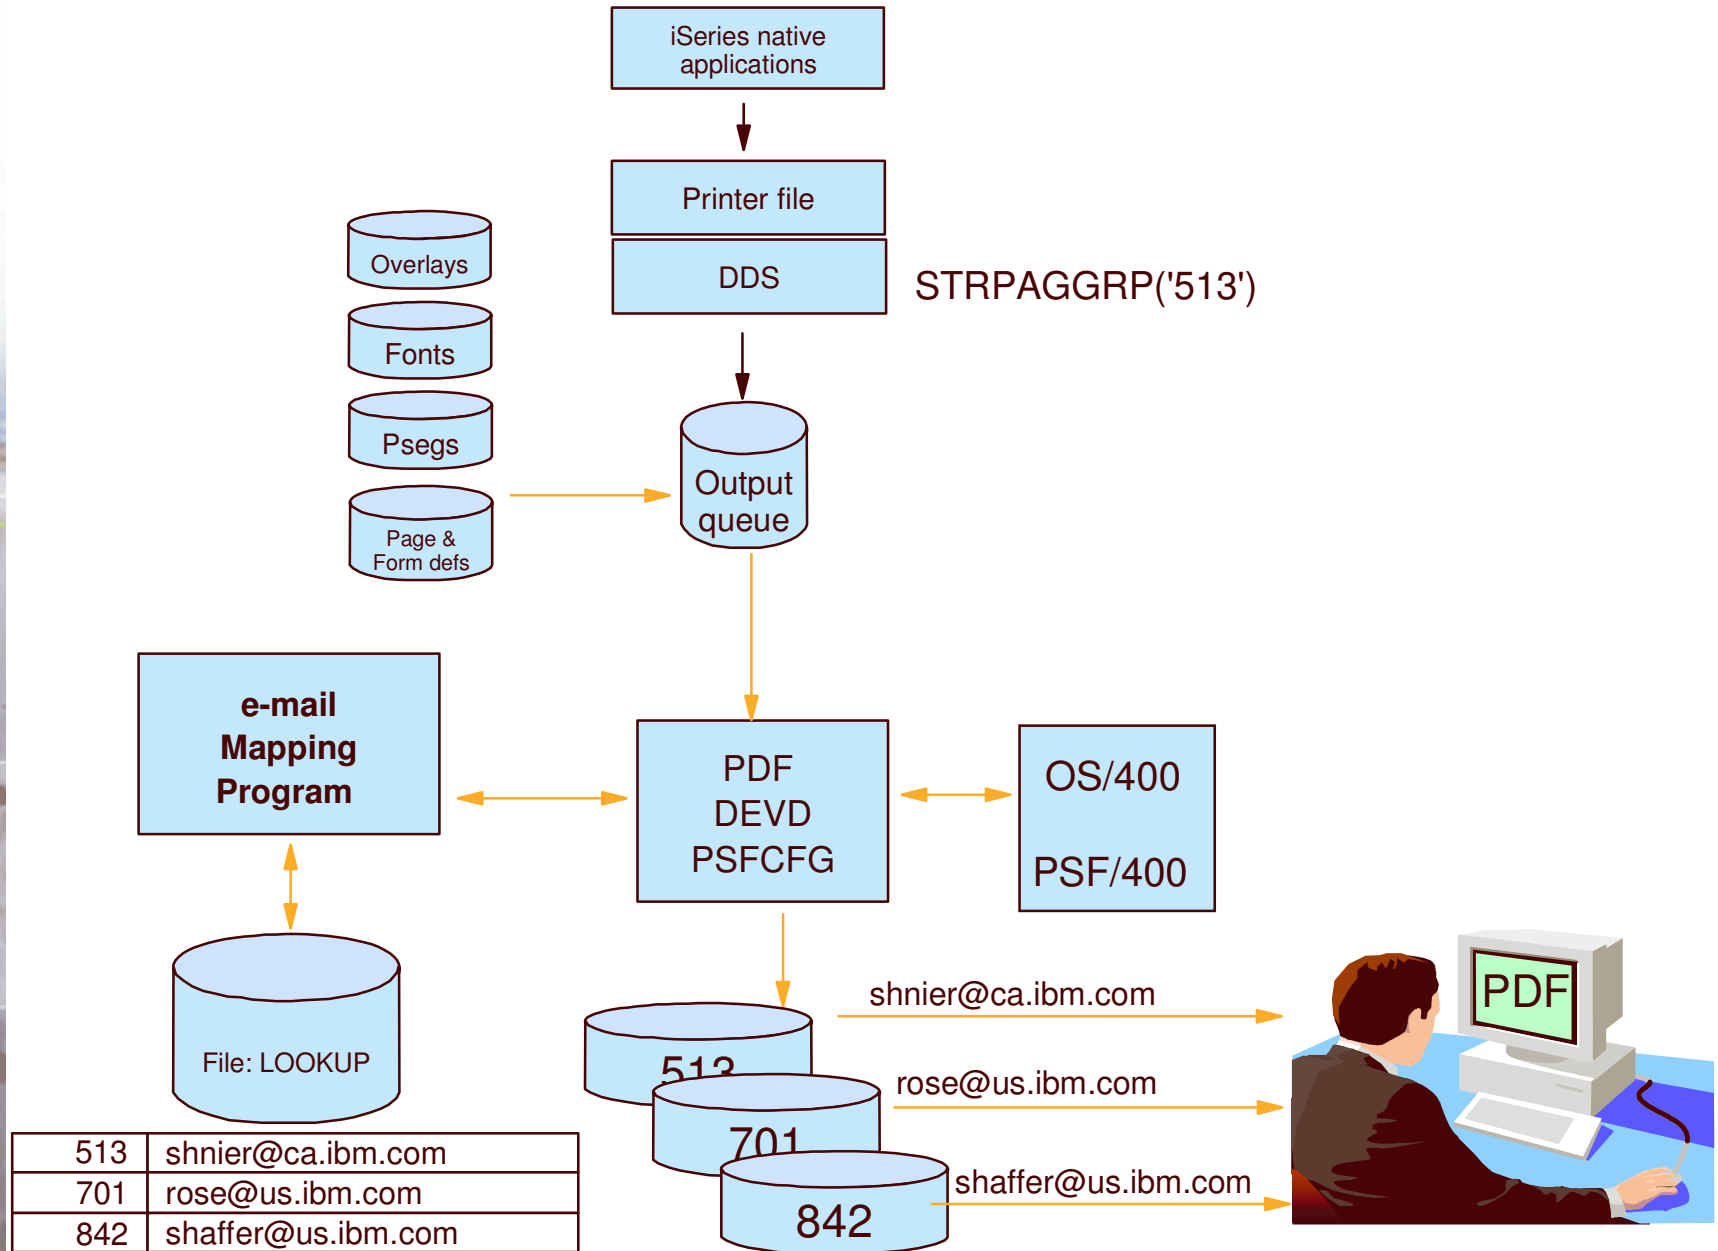

E-mail

OUTPUT

Printing Systems

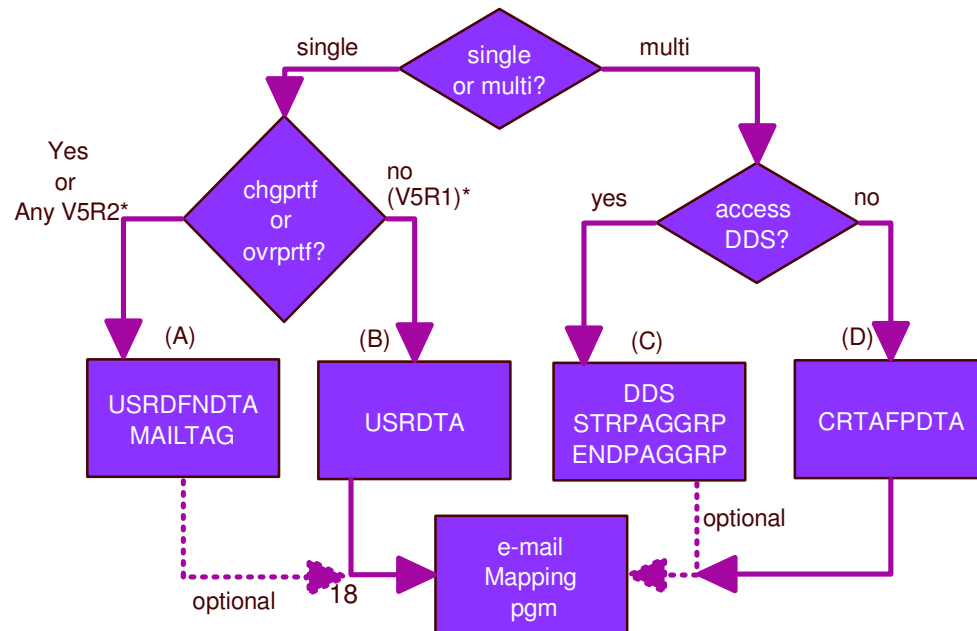

The output of e-business™

Michigan Infoprint Server.PRZ

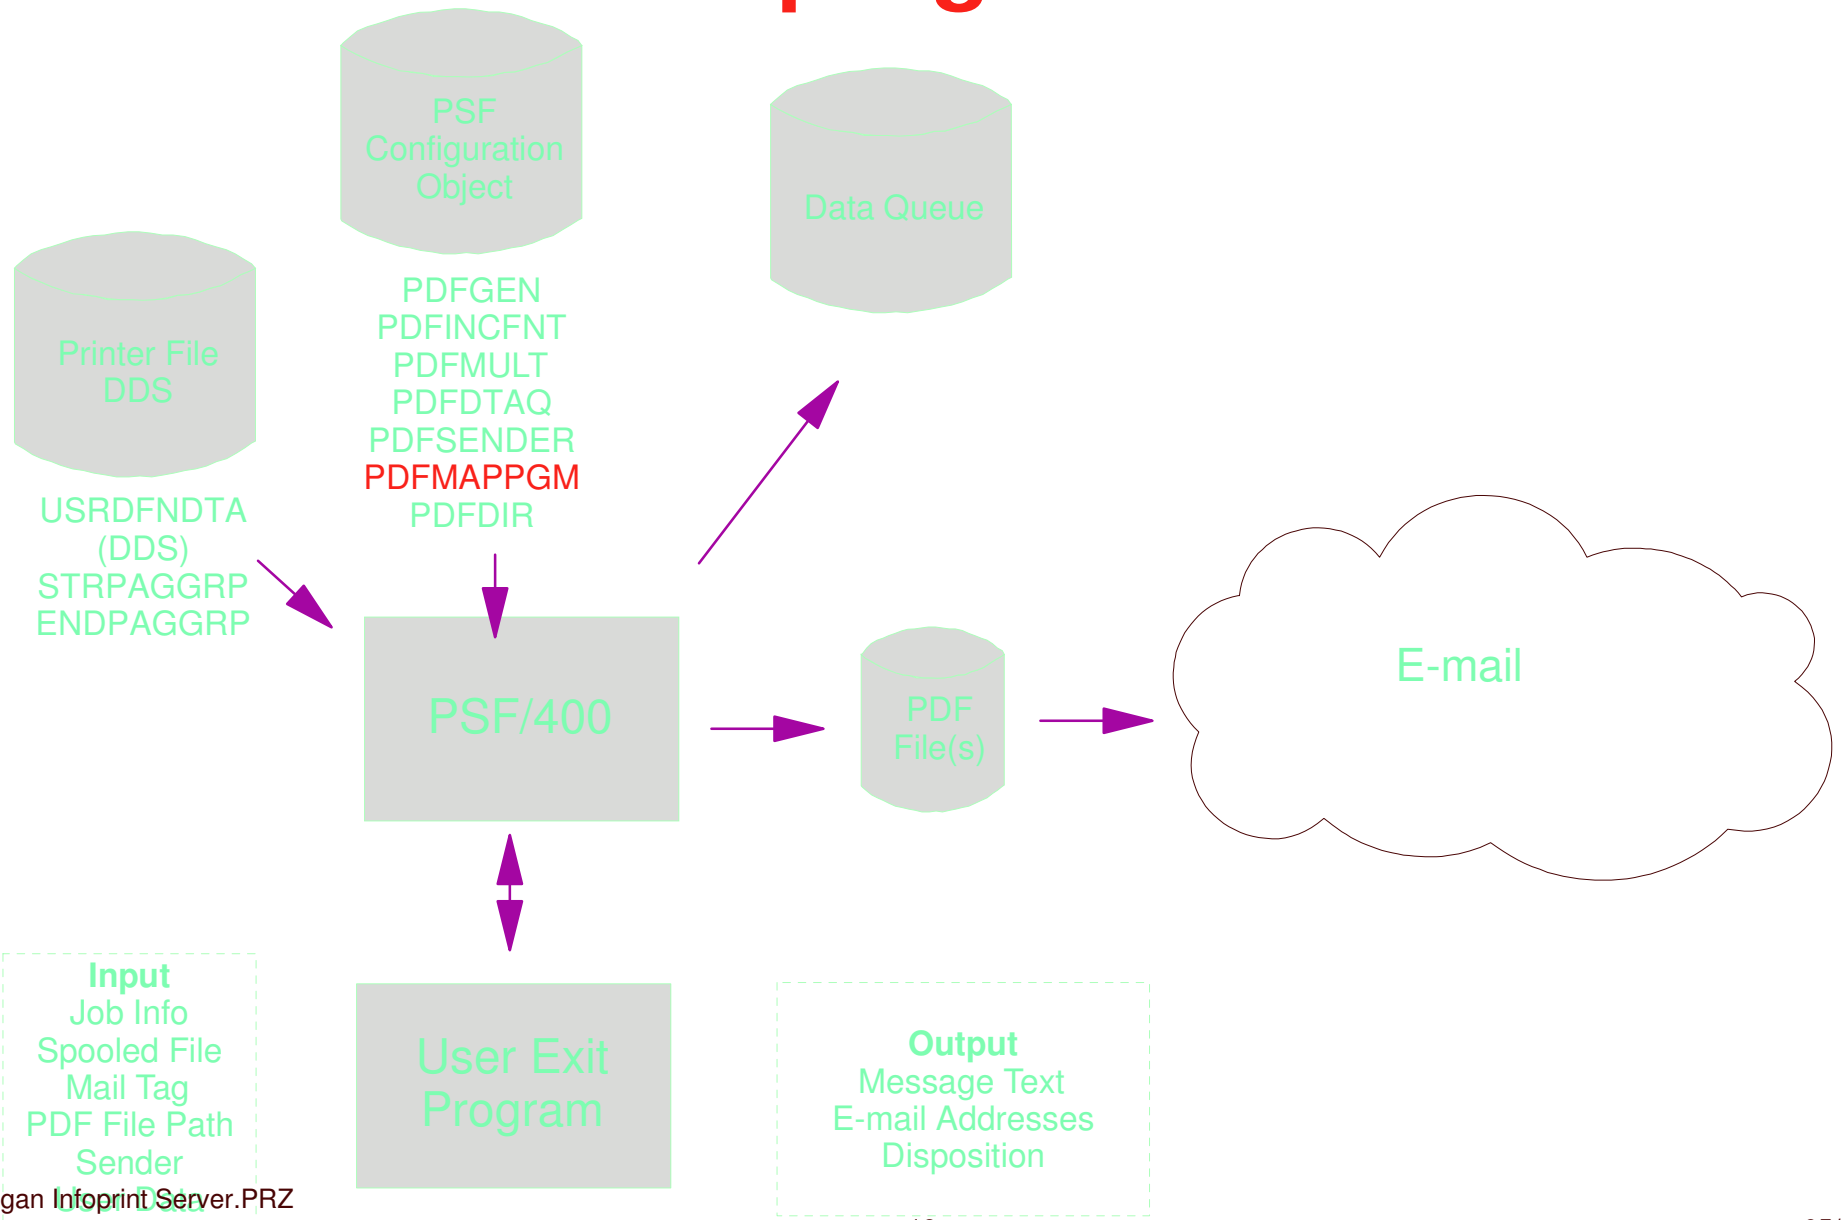

E-mail address

- Different ways to set e-mail address:
- Depends on single vs. multiple & application
 - Single distribution:
 - `USRDFNDDTA('MAILTAG(mshnier@ca.ibm.com)')`)
 - `USRDDTA('Dept842')`
 - Multiple distribution:
 - group records to define separation points and e-mail tag
 - DDS - use `STRPAGGRP/ENDPAGGRP` keyword
 - `CRTAFDDTA` to insert index records

* On V5R2 you can change USRDFNDDTA with CHGSPLFA after spooled file is created.

E-mail with exit program

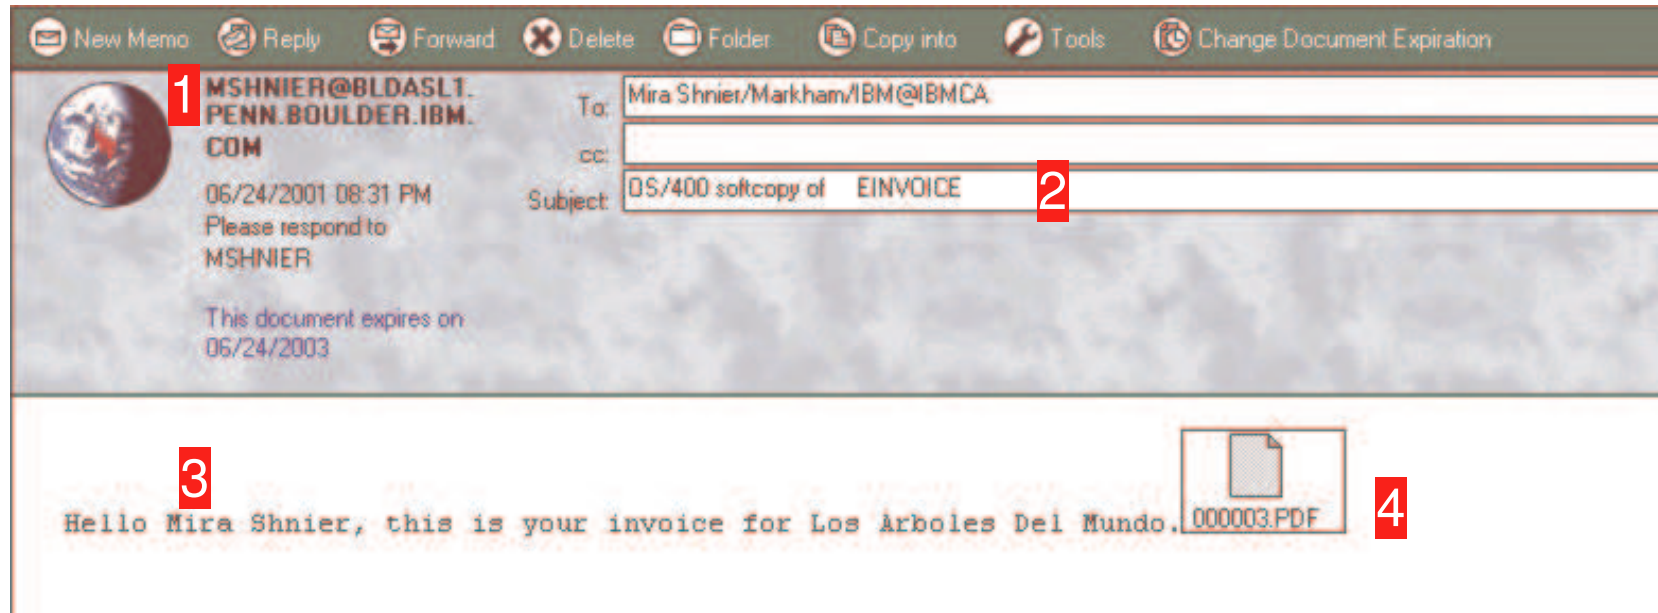

Use exit program

- if information provided is not a valid e-mail address
 - i.e. convert "Dept842" to "wshaffer@us.ibm.com"
- build a 255 byte message (V5R1)
- imbed additional text or HTML files (V5R2)
- add additional attachments (V5R2)
- change subject line (V5R2)
- set Reply-to: CC: and BCC: addresses (V5R2)*
- process files multiple times (V5R2)
- decide not to e-mail a file
- some error checking and logging
- make copy of PDF file to IFS
- change security of IFS file (Default is *PUBLIC gets *Exclude)
- assign a meaningful name for IFS file
- set CCSID (V5R2)

*Only available if using SMTP server.

Sample e-mail received (V5R1)

- 1** MSHNIER was the user on BLDASL1 who was the "SENDER"
- 2** Subject line info comes from PQT4133 in message file QPQMSGF.
 - you may "unofficially" modify the first 22 characters
- 3** Up to 255 characters of text message may be customized using mapping program.
 - (default message is, "Mail was sent by OS/400 process. Please do not reply to this address." Also stored in PQT4133.)
- 4** This was the 3rd segment of a file processed as "multiple"

V5R2 enhancements

- Use any SMTP mail server (instead of SNDDST on V5R1)
- Greater flexibility in document content
 - imbed extra text or HTML file
 - add other attachments
 - customize subject line
- Greater flexibility in addressing
 - ReplyTo e-mail address
 - CC: and BCC: addresses
- Index records in spooled file become PDF bookmarks
- iSeries Access for Windows - GUI interface to generate ad-hoc PDF and/or e-mail

Sample e-mail received (V5R2)

File size considerations

- By default PDF includes Adobe fonts
- Files may be large if many fonts used
- V5R1 - Use PSFDFNOPT with PDFINCFNT(*NO) in your PSFCFG (PTF si03186 required)
- V5R2 use PDFINCFNT(*NO) parameter

File Description	no. of pages	size of PDF	After PTF
Short JOBLOG	2	58 KB	
Medium JOBLOG	19	94 KB	
Long JOBLOG	217	493 KB	
Single Invoice	1	752 KB	52 KB
Multiple Invoices	6	761 KB	59 KB

Improve quality with Outline Fonts

- iSeries Raster fonts produces Type-3 pdf fonts
- Note: The difference is only evident when viewing the pdf. Printing both versions produces the same quality results.
- iSeries Outline fonts produces Type-1 pdf fonts
- Use USEOUTLFNT(*YES) on your PSFCFG to force outline fonts to be used

Print enterprise output on IPDS printers - solution

- 1. From a Windows workstation, a user submits the document for printing on an IPDS printer using a printer shared through NetServer
- 2. The document is put on the OS/400 spool and then directed to Transform Manager
- 3. Transform manager uses the PCL transform to transform the data to AFP
- 4. The transform sends the AFP data to PSF/400
- 5. PSF submits the data for printing

Print Serving

OUTPUT

Printing
Systems

The output
of e-business™

Postscript, PCL, PDF to AFP

- Transforms are integrated into OS/400 architecture
- Provides generic iSeries print support for ERP applications
- Workstation access through LPD, NetServer
- IPP
- Adobe transform for PDF and Postscript to AFP
 - Level 3 full support
 - Developed jointly by IBM and Adobe
 - Equivalent transform on iSeries, xSeries, pSeries, and zSeries
- PCL transform to AFP
 - PCL 5e
- Runs in PASE environment

PCL/PS/PDF to AFP setup

- Transformations based on:
 - PCL vs. (PostScript/PDF)
 - edge-to-edge vs. 1/6" non-print border
- Transformation configuration file specifies how many of each combination: minimum & maximum
- Printer device description includes
 - AFP(*YES)
 - IMGCFG(*IMGCnn), where nn is based on print density, edge-to-edge(y/n), image compression
- STRTFMMGR / ENDTRMMGR

Integrate web and network images into iSeries applications - solution

- 1. The user sends the image file to the Windows-based JPEG transform to create an AFP image file.
- 2. Next, the user could use the AFP Manager component of Operations Navigator to create the page segment and store it in the iSeries. Alternatively, the user could use a network drive mapped to an iSeries to put the AFP output file in a shared folder, then use OS/400 commands to create it as a page segment on the iSeries.

Image Transforms

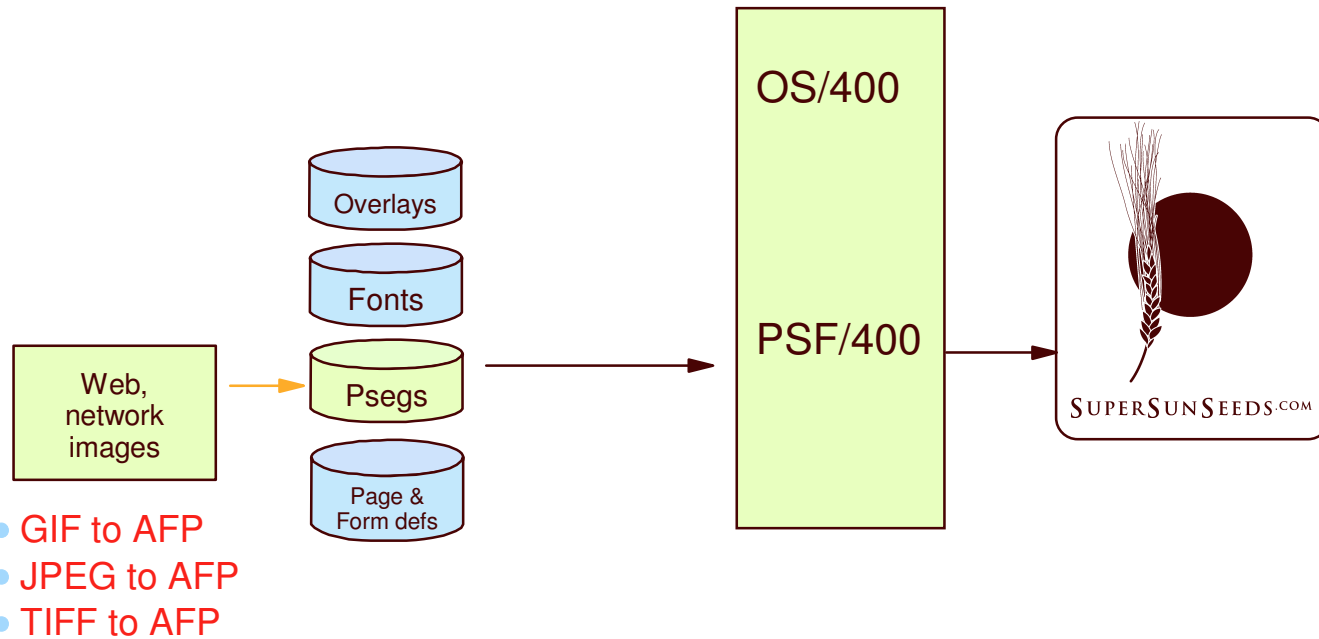

- Windows transforms for GIF, TIFF, and JPEG image files
 - Transform to iSeries image format (page segment)
 - Can be run dynamically via STRPCCMD (Start PC Command)

OUTPUT

Printing
Systems

of e-business™*

Architecture: Web image

OUTPUT

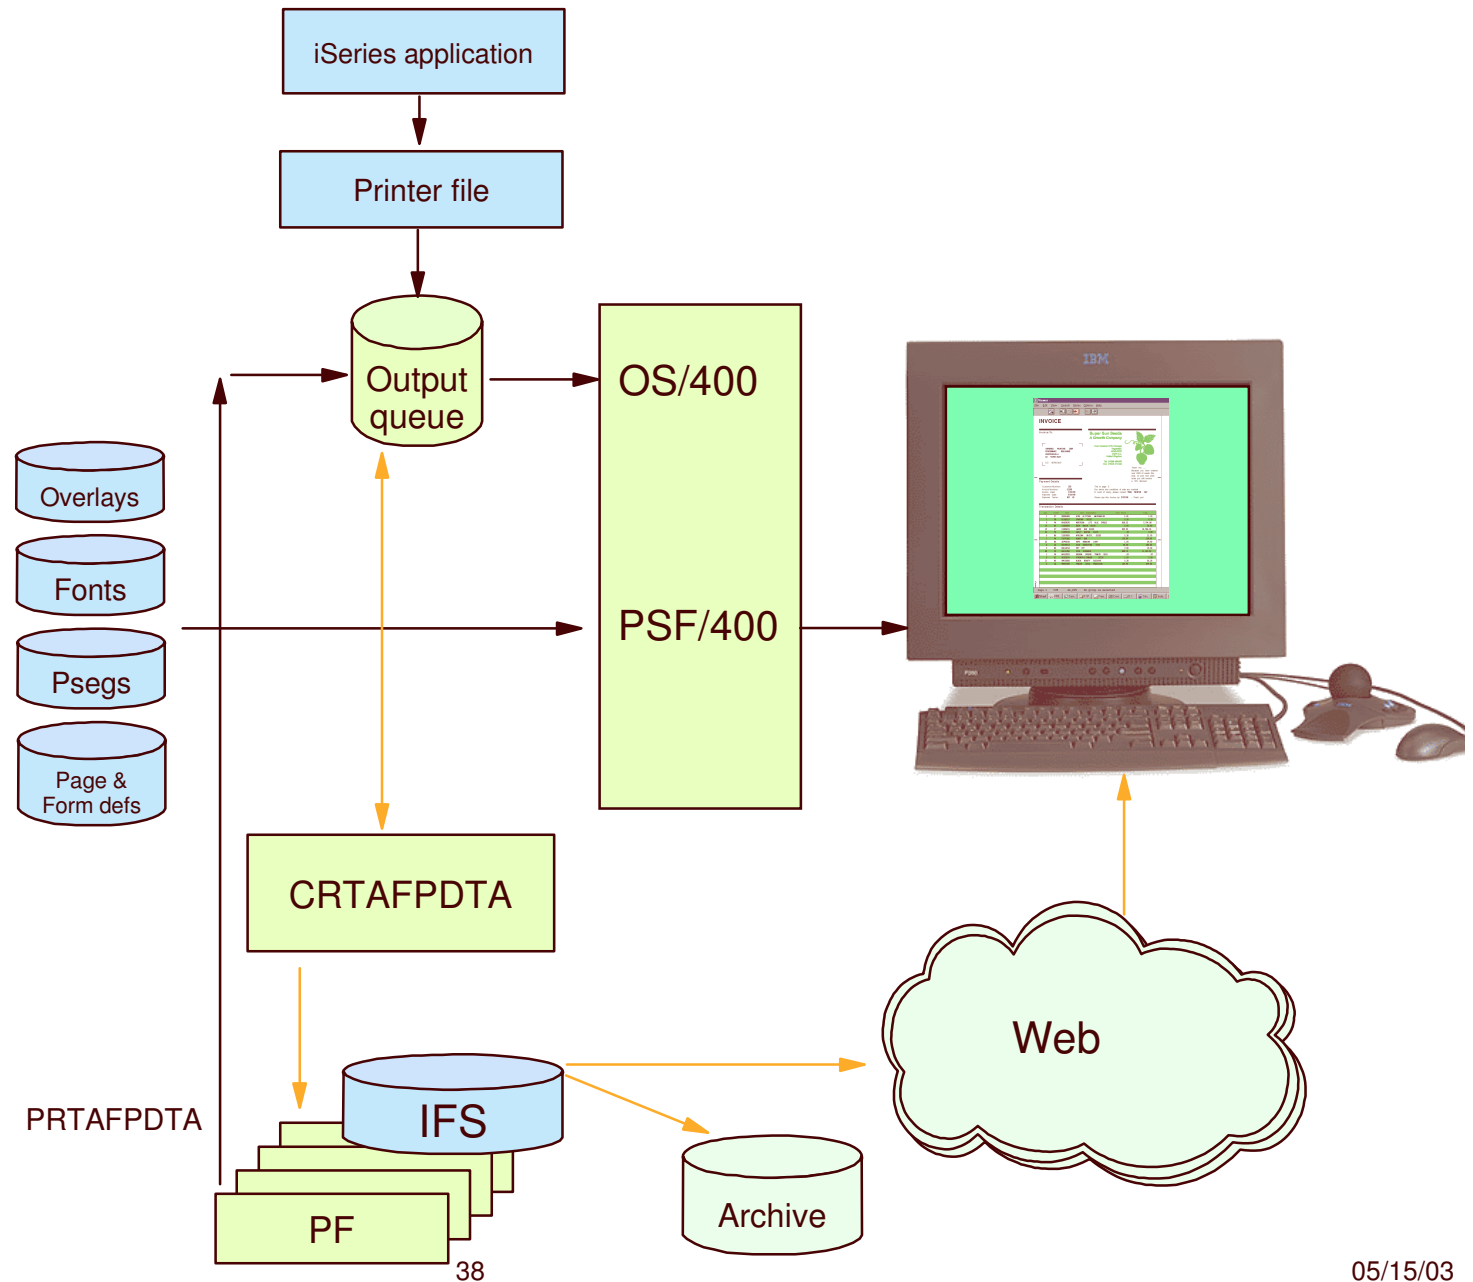

Printing Systems

The output of e-business™

Indexed data for fast navigation - solution

- 1. An application creates the data and puts it on the OS/400 spool.
- 2. The **CRTAFPDTA** command generates the document as an **AFP stream file**, puts the indexing information in an **index object stream file**, gathers all of the needed resources into a **resource stream file**, then concatenates them into a **merged stream file**.
- 3. Users can now view the indexed file on their workstation, send the file for use on another system, or archive the file.

Architecture: Portable AFP

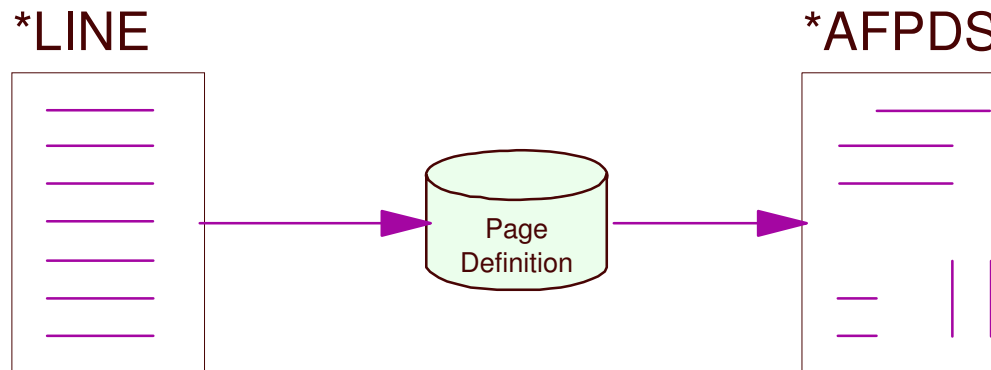

OUTPUT

Printing
Systems

The output
of e-business™

CRTAFPDTA and CVTLINDTA similarities

- Convert *LINE data to *AFPDS (MO:DCA)
 - Use with AFP Viewer
 - Print to non-IPDS printers using HPT
 - Processes the "rules" from Page Definition to create resolved output

CRTAFPDTA vs. CVTLINDTA differences

CRTAFPDTA	CVTLINDTA
Command with many parameters	Printer file parameter (*YES/*NO)
Input is existing *LINE Spooled file	Input comes directly from application program
Output is Stream file in AFPDS format	Output is *AFPDS spooled file
Part of Infoprint Server Licensed Pgm. (\$)	Free with OS/400
Allows for Indexing and Resource capture	No indexing or resource capture
Portable AFP - print or view anywhere	Print only from same iSeries (PSF or HPT). View with CA Express Ops Nav.

What else would you use if for?

- Create an index document
 - AFP Viewer - quick access to selected pages
 - PDF generation - index to segment large file and add addressing information for e-mail or generate PDF bookmarks
 - Archive & Retrieve selected groups of pages
- Create a resource group
 - Portable AFP
 - Other iSeries or other platforms
 - Fidelity forever for Archive / Retrieve
 - even if external resources change over time
 - When sending print to an outsourcer
 - AFP Viewer on Web
- Concatenate the AFP, Index and Resource file into one Merged file

OUTPUT
